

Design guide for How Many Strokes Screen saver

To ensure that your screen save always looks good, please follow these few guidelines.

1080 pix

1920 pix

16:9 format

If measured in mm. the format would be:

160 mm. X 90 mm.
or
320 mm. X 180 mm.

The pixel number can also be higher or lower but we recommend 1080x1920 pix to ensure a sharp and clear image

Other acceptable formats could be:

540 X 960 pix
or
2160 X 3840 pix

Saving the picture in JPG is recommended.

For videos we recommend using:

540 X 960 pix
This will keep the file size low and still make the video sharp.

If the picture is not in **16:9 format** it will be scaled to fit on the Terminal.

This picture is in the right format.

You can always test the format but clicking "**Load clubhouse terminal in browser**" next to "Layout" in the How Many Strokes Portal "
